Week 2 Summary

Garrett Amidon

April 10, 2016

Chapters 3 and 4 of "Linux Kernel Development 3rd edition" (published June 2010), by Robert Love discussed and familiarized the reader with process management and scheduling. The author starts off simple by defining what a process is before going into what processing and scheduling is. By using this strategy, the author is able to reach to a greater audience in order for the reader to know what is going on and how a process is used. The audience this section is most shaped towards is those who want to understand how a process works and is used and possible system administrators
